Work Authorization: H-1B approved. Cap-subject lottery no longer applies; a transfer petition may be filed at any time of year.

PROFESSIONAL EXPERIENCE

EvidentID — DevOps Engineer | Atlanta, GA | Mar 2024 – Aug 2026

- Executed a zero-downtime Helm 2 to Helm 3 migration across 100+ production services: upgraded Helm binaries on Jenkins and GitHub Actions runners, rewrote Ansible roles and playbooks, and republished all charts to Artifactory.
- Migrated Python microservices from AWS EC2 to Azure Kubernetes Service (AKS), containerizing each service and authoring parameterized Helm charts for consistent, repeatable deployments across environments.
- Reduced Azure AKS reservation costs by 50% by migrating three clusters to memory-optimized E4as_v7 VMs and configuring Terraform autoscaling policies to burst onto cost-efficient D4as_v7 nodes.
- Upgraded 109 EC2 instances from Ubuntu 18/20 to Ubuntu 24 with zero downtime using blue-green deployments orchestrated end-to-end through Ansible.
- Automated support data-retrieval workflows with Python Lambda functions triggered by Jira webhooks, removing DevOps from the ticket path and significantly reducing turnaround time.
- Operated platform observability across CloudWatch, Sentry, and Logz.io, using log and metric analysis to isolate and resolve production incidents and reduce mean time to resolution.
- Built dashboards for real-time resource tracking and capacity oversight, informing scaling and deployment decisions across the engineering organization.

Bentley University — MyHealthNote Research Platform | DevOps Engineer | Waltham, MA | Sep 2021 – Dec 2022

Cloud infrastructure lead on a research initiative under Dr. Sandeep Purao, delivering a live cross-platform healthcare application supporting elderly self-care in urban communities (myhealthnotes.us).

- Provisioned and operated AWS infrastructure (EC2, S3, RDS for MySQL) for a publicly accessible production research platform.
- Built CI/CD pipelines in Jenkins and GitHub Actions, automating builds and deployments and eliminating manual release steps.
- Containerized services with Docker and deployed via AWS ECS for fault-tolerant, horizontally scalable operation.
- Authored Infrastructure-as-Code templates in Terraform and CloudFormation for consistent, reproducible environment provisioning.
- Instrumented monitoring and logging with AWS CloudWatch and custom logging agents to track application and infrastructure performance.

Bill.com — Business Intelligence Analyst, Intern | San Jose, CA | May 2022 – Aug 2022

- Built Tableau and SQL dashboards measuring recruiting-team performance, giving Talent Acquisition leadership visibility into pipeline bottlenecks and process gaps.
- Contributed to the development of a company-wide data governance framework.

Lincoln University — Software Engineer Intern & Teaching Assistant | Oxford, PA | Jan 2018 – May 2021

- Built the backend for Ashmun Express, a mobile study application for early-career STEM majors: designed the MySQL schema and REST APIs deployed on Heroku, improving web server response time by ~5% through API-level authentication and query optimization. Work published in the ASEE Annual Conference Proceedings (see Publications).
- Tutored an average of 15 students daily in algebra, statistics, precalculus, and calculus.

TECHNICAL PROJECTS

Imvlar — Audio-First AI Learning Platform | imvlar.vercel.app | 2026

Next.js 16, React 19, TypeScript, Vercel AI SDK, Anthropic Claude, OpenAI, Web Audio API

- Built a full-stack real-time voice learning application closing a speech-to-text to streaming-LLM to text-to-speech loop, letting users consume technical content hands-free and interrupt by voice to ask questions.
- Engineered a streaming sentence-level TTS pipeline using a producer/consumer pattern that detects sentence boundaries in the live token stream, cutting time-to-first-audio from ~30s to ~2-3s.
- Designed a two-tier intent classifier (regex fast path with Claude Haiku fallback) resolving ~80% of voice inputs at zero latency and the remainder in ~300ms, minimizing API cost while preserving responsiveness.
- Hardened async correctness with generation counters and AbortControllers to eliminate race conditions under rapid input; secured prompts against injection and unit-tested core logic with Vitest.

Self-Hosted Kubernetes Observability Stack | *Personal Infrastructure Lab*

- Deployed Prometheus and Grafana on a self-managed Kubernetes cluster using the kube-prometheus-stack Helm chart, configuring ServiceMonitor CRDs for automatic service discovery and custom scrape targets.
- Uses the cluster to prototype platform patterns outside production constraints, including autoscaling behavior, alerting rules, and GPU-backed inference serving.

PUBLICATIONS

Smith, T. R., Safford, S. E., Iguwe, C., & Akinlade, M. (2021). "Ashmun Express: A Mobile-based Study Application for STEM Students." ASEE Annual Conference and Exposition, Conference Proceedings. American Society for Engineering Education. Open access — doi.org/10.18260/1-2--36701

EDUCATION

Indiana Wesleyan University: M.S., Artificial Intelligence | Jun 2026 – Present

Bentley University: M.S., Business Analytics | GPA 3.80

Lincoln University: B.S., Computer Science | GPA 3.88

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) — in progress

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, S3, RDS, ECS, Lambda, CloudWatch), Azure (AKS), Terraform, CloudFormation, Ansible

Containers & Orchestration: Kubernetes, Helm, Docker, AKS, EKS, ECS, Artifactory

CI/CD & Version Control: Jenkins, GitHub Actions, Git, Jira

Observability: Prometheus, Grafana, Sentry, Logz.io, CloudWatch

Languages: Python, Bash, TypeScript, JavaScript, SQL, YAML, JSON

Data & AI: Anthropic Claude API, OpenAI API, Vercel AI SDK, Tableau, MongoDB
